

- HIGH QUALITY MATERIALS
- FAST DELIVERY
- COMPETITIVE PRICES
- SIMPLE AND FAST INSTALLATION
- TAILOR-MADE
- DIAMETER: 2.01 – 30.15M
- VOLUME: 4.8 – 2,177 M³

WATER STORAGE SYSTEMS

STEEL TANKS, RESERVOIRS, PLASTIC TANKS/CONTAINERS AND MORE

One of our latest product lines is water storage systems used in agriculture, horticulture, aquaculture, and industry. We offer storage systems such as steel tanks, reservoirs, and plastic tanks/containers. Our water storage tanks are customized to local requirements and conditions.

High-quality steel tanks/silos

The use of constantly high-quality materials guarantees a proper end product. For panels, 1 mm. thick and above, S350 tensile steel with 450 grams galvanized coating per square meter on both sides gives increased life to first maintenance. On request, the silo is supplied with a very high-quality powder coating gives added protection to

manure and acids. Diameters from 1.86 m. up to 40.5 m. and till 5.33 m. height.

Liners for silos

To make a silo watertight, we provide liner/lining. Our high-quality liners are packed in high-quality stackable boxes to prevent damage in transit. The polyolefine material is very strong in tensile strength and flexibility. Its UV resistance is high and has a very long life expectancy (+15 years). The material resistance to fertilizers, chlorine, salts, and other aggressive products is very high. Liner is produced up to 10,000 m². Prefabricated in one large piece with clear rollout and installation drawings on the package.

Covers

Our cover is a substantial galvanized steel section roof, which incorporates an integral inspection hatch. The roof is designed with a 10-degree pitch which allows sufficient dispersal of rainwater, whilst not significantly increasing the height at the center of the silo. This type of roof would normally be fitted in areas with strong winds of high snow loads and where safety and protection against vandalism are a high priority.

SP (Short Panel) water tanks

Pureco introduces the SP water tank, a new range of tanks with easy transport. The main advantage of these tanks is their length, which is only about 2.30 m. It is easy to load in a container or truck. Panel heights, the 450 micron galvanizing, bolts and nuts remain the same as our standard tanks. SP tank can be ordered with complete or only bottom ring coating.

Delafloat cover for watersilo's and lagoons

- No algae grow anymore
- No evaporation
- Less heating of the water due to the reflection
